capacities with PowerSecure, General Electric, Siemens Power T&D and Alstom T&D. During the course of Wayne's participation in the industry, his focus has been on the application of protection and control systems for electrical generation, transmission, distribution, and distributed energy resources.

GENERATOR PROTECTION THEORY & APPLICATION

The principle of time overcurrent protection is that relays are applied appropriately at the terminals of zones, and each relay is then given both a current pickup and a time delay setting. The current pickup establishes the sensitivity of the relay; a variety of “rules” dictate what this sensitivity must be.
