Sample Size. Should active air sampling use two media for bacteria and molds and is the sample size 500 or 1000 L per medium? It may be prudent to move from a single general microbiological growth medium like soybean-casein digest agar to two media such as soybean-casein digest agar and malt extract agar or Sabouraud dextrose agar, if mold begins to be isolated.

A landfill site (also known as a tip, dump, rubbish dump, garbage dump or dumping ground and historically as a midden) is a site for the disposal of waste materials by burial. It is the oldest form of waste treatment (although the burial part is modern; historically, refuse was just left in piles or thrown into pits). Historically, landfills have been the most common method of organized waste ...

A genome sequence is the complete list of the nucleotides (A, C, G, and T for DNA genomes) that make up all the chromosomes of an individual or a species. Within a species, the vast majority of nucleotides are identical between individuals, but sequencing multiple individuals is necessary to understand the genetic diversity.
