The Mendeleev Lab of 1869. Adapted from Holt Chemistry: Visualizing Matter, 2000 . Problem: Use your knowledge of the periodic table to determine the identity of each of the nine unknown elements in this activity. q The unknown elements are from the following groups in the periodic table. Each group listed below contains at least one unknown.

The periodic table, also known as the periodic table of elements, is a tabular display of the chemical elements, which are arranged by atomic number, electron configuration, and recurring chemical properties. The structure of the table shows periodic trends. The seven rows of the table, called periods, generally have metals on the left and non-metals on the right.

In chemistry, an ionic compound is a chemical compound composed of ions held together by electrostatic forces termed ionic bonding. The compound is neutral overall, but consists of positively charged ions called cations and negatively charged ions called anions. These can be simple ions such as the sodium (Na +) and chloride (Cl -) in sodium chloride, or polyatomic species such as the ammonium ...
