A plane is a two-dimensional doubly ruled surface spanned by two linearly independent vectors. The generalization of the plane to higher dimensions is called a hyperplane. The angle between two intersecting planes is known as the dihedral angle. The equation of a plane with nonzero normal vector  $n=(a,b,c)$  through the point  $x_0=(x_0,y_0,z_0)$  is  $n \cdot (x-x_0)=0$ , (1) where  $x=(x,y,z)$ .

When all the forces that act upon an object are balanced, then the object is said to be in a state of equilibrium. The forces are considered to be balanced if the rightward forces are balanced by the leftward forces and the upward forces are balanced by the downward forces. This however does not necessarily mean that all the forces are equal to each other.

### **Equilibrium and Statics - physicsclassroom.com**

The quantity work has to do with a force causing a displacement. Work has nothing to do with the amount of time that this force acts to cause the displacement. Sometimes, the work is done very quickly and other times the work is done rather slowly.

I've been laying bricks for over eight years. It wasn't easy at first, but with mentorship and practice, I soon became an expert bricklayer. When I first picked up a trowel, I didn't have a clue how to use it. The people who were supposed to be teaching me how to lay bricks were too busy with their ...
