In mathematics, a matrix (plural: matrices) is a rectangular array of numbers, symbols, or expressions, arranged in rows and columns. For example, the dimensions of the matrix below are 2×3 (read "two by three"), because there are two rows and three columns: $\begin{bmatrix} - & - \\ - & - \end{bmatrix}$. Provided that they have the same size (each matrix has the same number of rows and the same number of columns as the other ...

Broadly speaking, modularity is the degree to which a system's components may be separated and recombined, often with the benefit of flexibility and variety in use. The concept of modularity is used primarily to reduce complexity by breaking a system into varying degrees of interdependence and independence across and "hide the complexity of each part behind an abstraction and interface."
