Emotional Sensitivities . One of the key psychological characteristics of giftedness is a phenomenon known as “asynchronous development”, in other words a child’s emotional maturity is way out of kilter with his or her intellectual ability, leading to heightened emotional and sensory sensitivities. For example, a gifted 7 year old may have the intellectual ability of a 17 year old, yet ...

Hyperfocus is an intense form of mental concentration or visualization that focuses consciousness on a subject, topic, or task. In some individuals, various subjects or topics may also include daydreams, concepts, fiction, the imagination, and other objects of the mind. Hyperfocus on a certain subject can cause side-tracking away from assigned or important tasks.
