At the heart of chemistry are substances — elements or compounds— which have a definite composition which is expressed by a chemical formula. In this unit you will learn how to write and interpret chemical formulas both in terms of moles and masses, and to go in the reverse direction, in which we use experimental information about the composition of a compound to work out a formula.

Stoichiometry is a quantitative process. Given an initial mass or volume of reactant or product, the molar relationships between reactants and products in a chemical reaction are used to calculate a specific mass or volume of another reactant or product.

Real Gases - Van der Waals Equation Basic Concept Van . der Waals Equation. The Van . der Waals equation is an equation similar to the Real Gas Law, but includes two constants, a and b, to account for deviations from ideal behavior.. The van . der Waals equation is:  $[P + (n^2 a/V^2)](V - nb) = nRT$ . Where: P - pressure, V - volume, n. - number of moles,. T. - temperature,
