In mathematics education, Finite Mathematics is a syllabus in college and university mathematics that is independent of calculus. A course in precalculus may be a prerequisite for Finite Mathematics.. Contents of the course include an eclectic selection of topics often applied in social science and business, such as finite probability spaces, matrix multiplication, Markov processes, finite ...

Discrete mathematics is the study of mathematical structures that are fundamentally discrete rather than continuous. In contrast to real numbers that have the property of varying "smoothly", the objects studied in discrete mathematics – such as integers, graphs, and statements in logic – do not vary smoothly in this way, but have distinct, separated values.

Combinatorics is the branch of mathematics studying the enumeration, combination, and permutation of sets of elements and the mathematical relations that characterize their properties. Mathematicians sometimes use the term "combinatorics" to refer to a larger subset of discrete mathematics that includes graph theory. In that case, what is commonly called combinatorics is then referred to as ...

The Fourier transform of a function is implemented the Wolfram Language as `FourierTransform[f, x, k]`, and different choices of `and` can be used by passing the optional `FourierParameters-> a, b` option. By default, the Wolfram Language takes `FourierParameters` as `.` Unfortunately, a number of other conventions are in widespread use. For example, `is` used in modern physics, `is` used in pure mathematics ...
