Merzbacher's Quantum Mechanics is not the most popular graduate text for QM; however, it is one of the options that some professors will choose. This text tries to be a very thorough study of quantum mechanics, but at times it is definitely very difficult to follow. Let's say we're looking to study topic A, and you turn to the index to look for it.

Since the invention of quantum mechanics, even the simplest example of the collisional breakup of a system of charged particles, $e^- + H \rightarrow H^+ + e^- + e^-$ (where e^- is an electron and H is hydrogen), has resisted solution and is now one of the last unsolved fundamental problems in atomic physics. A complete solution requires calculation of the energies and directions for a final state in ...

This paper demonstrates the application of matrix methods based on finite differences and on variational (Rayleigh-Ritz-Galerkin) procedures to solution of the radial Schrödinger equation for bound states of the Morse potential. It demonstrates sources of numerical inaccuracy: truncation, termination, tolerance, and quadrature. Cubic splines, harmonic oscillators, floating Gaussians, and ...

Expressions are obtained for the power radiated by a modulated electron beam passing near the surface of a (perfectly conducting) diffraction grating. The electromagnetic fields are calculated in terms of the two-dimensional scalar Green's function for the grating surface. The grating profile may be chosen as any function that can be represented by a Fourier series, and the Green's function ...
