The Glossary. Abundance: any measure of the amount of an organism. Can include density, biomass, frequency, cover, presence/absence, etc. See species abundances in ordination.. Arch effect - a distortion or artifact in an ordination diagram, in which the second axis is an arched function of the first axis. It is caused by the unimodal distribution of species along gradients.

Robust statistics are statistics with good performance for data drawn from a wide range of probability distributions, especially for distributions that are not normal. Robust statistical methods have been developed for many common problems, such as estimating location, scale, and regression parameters. One motivation is to produce statistical methods that are not unduly affected by outliers.

Robust statistics - Wikipedia

OxMetrics is a family of software packages providing an integrated solution for the econometric analysis of time series, forecasting, financial econometric modelling, or statistical analysis of cross-section and panel data. OxMetrics consists of a front-end program called OxMetrics, and individual application modules such as Ox, CATS, PcGive, STAMP and G@RCH.

OxMetrics: Integrated econometric and statistical software

Neural networks like Long Short-Term Memory (LSTM) recurrent neural networks are able to almost seamlessly model problems with multiple input variables. This is a great benefit in time series forecasting, where classical linear methods can be difficult to adapt to multivariate or multiple input ...

Multivariate Time Series Forecasting with LSTMs in Keras

The earliest use of statistical hypothesis testing is generally credited to the question of whether male and female births are equally likely (null hypothesis), which was addressed in the 1700s by John Arbuthnot (1710), and later by Pierre-Simon Laplace (1770s).. Arbuthnot examined birth records in London for each of the 82 years from 1629 to 1710, and applied the sign test, a simple non ...

Statistical hypothesis testing - Wikipedia

Preface About this book. This book is written as a companion book to the Regression Models Coursera class as part of the Data Science Specialization. However, if you do not take the class, the

book mostly stands on its own.

Interactive Statistical Calculation Pages

Provides detailed reference material for using SAS/STAT software to perform statistical analyses, including analysis of variance, regression, categorical data analysis, multivariate analysis, survival analysis, psychometric analysis, cluster analysis, nonparametric analysis, mixed-models analysis, and survey data analysis, with numerous examples in addition to syntax and usage information.

SAS/STAT(R) 9.22 User's Guide

We present the original approach to the performing the Shapiro-Wilk Test. This approach is limited to samples between 3 and 50 elements. By clicking here you can also review a revised approach using the algorithm of J. P. Royston which can handle samples with up to 5,000 (or even more).. The basic approach used in the Shapiro-Wilk (SW) test for normality is as follows:

Shapiro-Wilk Test | Real Statistics Using Excel

What type of statistical analysis should I use to compare the differences in mean body weight for eight different groups?

What type of statistical analysis should I use to compare ...

This book teaches you to use R to effectively visualize and explore complex datasets. Exploratory data analysis is a key part of the data science process because it allows you to sharpen your question and refine your modeling strategies. This book is based on the industry-leading Johns Hopkins Data Science Specialization, the most widely subscri...

Exploratory Data Analysis with R - Leanpub

This is an introduction to R ("GNU S"), a language and environment for statistical computing and graphics. R is similar to the award-winning I S system, which was developed at Bell Laboratories by John Chambers et al. It provides a wide variety of statistical and graphical techniques (linear and ...

An Introduction to R

All designs applied are so-called two-level screening designs which allow to screen a relatively large number of factors in a relatively small number of experiments. The designs applied are fractional factorial [22-24] or Plackett-Burman designs [24,25]. In a robustness test one is only concerned about the main effects of factors (Remark). Remark.

Robustness/ruggedness tests in method validation

Provides detailed reference material for using SAS/STAT software to perform statistical analyses, including analysis of variance, regression, categorical data analysis, multivariate analysis, survival analysis, psychometric analysis, cluster analysis, nonparametric analysis, mixed-models analysis, and survey data analysis, with numerous examples in addition to syntax and usage information.
