Vulnerability Assessment Of Physical Protection

Vulnerability Assessment of Physical Protection Systems guides the reader through the topic of physical security with a unique, detailed and scientific approach. The book describes the entire vulnerability assessment (VA) process, from the start of planning through final analysis and out brief to senior management.

Vulnerability Assessment of Physical Protection Systems ...

Vulnerability Assessment. The primary objective of the Physical Security Vulnerability Assessment is to observe and analyze areas of potential and/or actual vulnerability, to define causes, and to recommend means to reduce or eliminate exposure. In conducting the assessment, Interfor utilizes a specialized process known as The Interfor Method.

The Comprehensive Physical Security Vulnerability Assessment

These voluntary, nonregulatory vulnerability assessments are the foundation of the National Infrastructure Protection Plan's risk-based implementation of protective programs designed to prevent, deter, and mitigate the risk of a terrorist attack while enabling timely, efficient response and restoration in an all-hazards, post-event situation.

VULNERABILITY ASSESSMENT OF PHYSICAL PROTECTION SYSTEMS

Physical security is defined as the use of intrusion detection and assessment, entry and search control, barriers and locks, communications, testing and maintenance, and support systems and interfaces to deter, detect, annunciate, assess, delay, and communicate an unauthorized activity.

Vulnerability Assessment Teams scrutinize business and operational practices to identify opportunities to reduce exposure to internal or external attacks, whatever their motivation and scope. Our experience and research proves that the application of physical security

Threat, Risk and Vulnerability Assessment

The vulnerability assessment may also include detailed analysis of the potential impact of loss from an explosive, chemical or biological attack. Professionals with specific training and experience in

these areas are required to perform these detailed analyses.

Unit IV - Vulnerability Assessment

This chapter elaborates the risk assessment of physical protection systems (PPS). The design and analysis of physical protection have to be addressed as an integrated system. In this way, all components of detection, delay, and response can be properly weighted according to their contribution to the PPS as a whole.
